

name
date of birth

mark symptoms according to degree of complaints:

+ = light, ++ = moderate, +++ = severe

infectious risk
tick bite
erythema migrans

general symptoms

flu-like complaints
feeling of chronic sickness
fatigue
sleepiness
reduced power
fever
skills
sweating
nightsweat
sore throat
headache
neck rigidity
chest pain
palpitations
loss of weight
gain of weight
swelling of lymph nodes
sexual dysfunction
alcohol intolerance
exacerbation of complaints following other infections

nervous system

acute lyme-neuroborreliosis:
severe stage of disease with neurological deficits
(paresis, sensory deficits, involvement of cranial nerves, especially facial nerve)
optic neuritis (impaired vision, blindness)

impaired brain function

(encephalopathy)
impaired concentration
impaired memory
sleep disorders
irritability
mood disorders
depression
dizziness (frocked)
impaired speech
impaired writing
impaired reading
impaired thinking

chronic lyme-neuroborreliosis

paresis
hypoesthesia
paraesthesia
muscle twitching
spontaneous movements
tremor
impaired hearing
noise hypersensitivity
tinnitus
disturbed taste
disturbed smelling
disturbed speech
(dysphasia)
disturbed writing
(dysgraphia)
disturbed reading
polyneuropathy
(pain, numbness and paraesthesia of extremities)
sensory deficit

musculo skeletal system

inflammation of joints
(monarthritis, migratory polyarthritis)
joint pain
(migratory arthralgias of large and small joints)
stiffness of joints
muscular pain
bursitis
damage of tendons
(tendopathy, enthesiopathy)
heel pain
skin bone pain
foot sole pain
pain of Achilles-tendon
carpal tunnel syndrome
epicondylitis
back pain
chest or body pain
spine bone pain

damage of cranial nerves

facial paresis
 optic neuritis
 visual disturbance
 partial defects of visual fields
 paresis of ocular muscles
 double picture
 strabism
 pain, tingling and numbness of the face
 dizziness
 hearing loss
 loss of taste and smelling
 aching tongue
 unpaired tongue movement
 weakness on lifting head or shoulders

heart

involvement of the heart muscle
 myocarditis
 impaired conduction
 chronic cardiomyopathy
 (dilatative cardiomyopathy)
 pericarditis

skin

erythema migrans (EM)
 recurrent EM
 multiple EM
 lymphocytoma (benign)
 (in combination with EM or instead of EM)
 acrodermatitis chronica atrophicans (ACA)
 (early stage, late stage)
 fibroma with ACA
 papulo-squamous lesions
 morphea
 (circumscribed ivory-colored, hardened skin)
 tingling or burning pain of the skin
 itching (pruritus)

eye

blurred vision
 double image
 eye pain
 other diseases of the eye
 uveitis
 retinal vasculitis
 neuro-ophthalmological disturbances
 paresis of ocular muscles
 periorbital edema
 orbital myositis
 conjunctivitis
 keratitis
 iritis
 inflammation of the retina
 (retinitis)
 blurring vision and foreign bodies due to
 infection of the vitreous
 visual fields defects

abdominal complaints

dyspeptic syndrome
 nausea
 diarrhea
 stomach pain
 belly pain
 constipation

other complaints

jaw pain
 sinusitis
